

NoDrftSystems — Critical Deficiencies Register

Version: 1.0 | **Date:** April 2026 | **Owner:** Founder

Review: Required before any client work begins

This document flags items that block safe execution. Each item is a hard stop, not a suggestion.
Review in order. Do not advance to next item until prior item is resolved or explicitly deferred with documented rationale.

STOP-001 | PRICING ARCHITECTURE UNRESOLVED

Severity: CRITICAL — Blocks all proposals

Status: OPEN

Two pricing structures exist in active documents with no reconciliation:

Document	Entry Price	Max Price
Business Plan v2 + Service Pricing Architecture	\$3,500	\$28,000
Business Foundation	\$8,000 (Diagnostic)	\$150,000

These are not close enough to treat as the same model with rounding. They represent different positioning, different client types, different margin structures, and different revenue projections.

Required action: Founder reviews both. Designates one as the operative pricing document. Archives the other (or designates it as a future-state document with explicit note it is not current).

Consequence of not resolving: Every proposal risks quoting the wrong tier, creating legal scope exposure and client expectation mismatch.

STOP-002 | LEGAL DOCUMENTS NOT CONFIRMED REVIEWED BY COUNSEL

Severity: CRITICAL — Blocks all contract execution

Status: OPEN (assumed — requires human confirmation)

The Legal Contract Framework explicitly states: *"All contracts must be reviewed and approved by licensed legal counsel before execution."*

It is not documented anywhere whether this review has occurred for:

- Master Service Agreement (MSA)
- Statement of Work (SOW)
- Non-Disclosure Agreement (NDA)

Required action: Founder confirms review status. If unreviewed, engage legal counsel before first contract execution. Document review date, reviewing attorney, and any modifications made.

Consequence of not resolving: Sending an unreviewed legal document to a client creates direct liability exposure.

STOP-003 | NO E-SIGNATURE TOOL DESIGNATED

Severity: CRITICAL — Blocks contract execution workflow

Status: OPEN

All contract templates reference client signatures. No e-signature tool (DocuSign, PandaDoc, HelloSign, or equivalent) is designated anywhere in the document set.

Sending PDFs for wet signature by post or manual digital scan is operationally untenable for a digital-first studio.

Required action: Select and activate one e-signature tool. Update contract workflow documentation to reference it. Ensure signed documents are stored in the correct client folder path.

STOP-004 | TIER 1 AI SUPERVISOR LAYER NOT DEPLOYED

Severity: CRITICAL — Blocks safe AI agent scaling

Status: OPEN

Current state: 10 agents operating independently without orchestration (~\$940/month).

Target state: 40 agents with Tier 1 supervisor governance (~\$2,770/month).

The Tier 1 layer (MOA, QAS, CSM, HHC) is the architectural prerequisite for everything else. Without it:

- Agent tasks are unrouted
- Context is lost between agents
- Quality gates are unenforced
- Human handoffs are uncoordinated
- Scope drift cannot be detected

Addendum 14 and 19 are explicit: *"Do not deploy Wave 2 until Wave 1 is stable."*

Required action: Deploy Wave 1 (4 Tier 1 agents + enhanced existing stack). Test and validate each supervisor agent before activating additional domain agents. Budget impact: +\$390/month above current baseline.

STOP-005 | ARE ROLE VACANT

Severity: HIGH — Blocks quality-controlled client delivery

Status: OPEN (assumed — requires human confirmation)

The AI Reliability Engineer (ARE) is referenced as a mandatory human authority across:

- QA Multi-Pass sign-off (SOP-005)
- Release gate authorization (SOP-006)
- Agent output review
- Context-First Definition of Done enforcement
- Milestone validation

Without the ARE, the Founder must personally perform all QA functions. This is sustainable for the first 1–2 projects only. At scale, it becomes a bottleneck that eliminates the margin advantage of the AI-augmented model.

Required action: Identify and onboard an ARE. Part-time or contractor is acceptable at Month 1. Define their specific review responsibilities, authority, and compensation. Budget: \$875/month commission-only (per Addendum 21).

MONITORING-001 | NO DOCUMENT REGISTRY EXISTS

Severity: MODERATE — Creates operational confusion over time

Status: OPEN

There is no single document that lists which version of each file is operative. With 40+ documents, this will create confusion during execution as older versions circulate.

Required action: Create a Document Registry spreadsheet or Notion table. For each document: name, current version, operative status (Active/Superseded/Draft), location, and last review date.

MONITORING-002 | DISCOVERY SPRINT NOT PRICED IN SERVICE ARCHITECTURE

Severity: MODERATE — Creates sales friction
Status: OPEN

Discovery Sprint is defined in SOP-003 and referenced in the qualification scoring matrix, but does not appear as a priced line item in the Service Pricing Architecture document.

Required action: Add Discovery Sprint as a named, priced, scoped service. Suggested: \$2,500-\$4,000 flat fee, 5 business days, scoped deliverables (scope brief, package recommendation, execution plan). Cross-reference in qualification routing guide.

This register must be reviewed by the Founder. Items marked STOP block execution. Items marked MONITORING should be resolved within 30 days. Human sign-off required to close each item.
