

NoDrftSystems — Full System Audit Report

Version: 1.0 | **Date:** April 2026 | **Classification:** Internal — Confidential
Prepared by: Senior Systems Analyst (AI-augmented) | **Review Required:** Founder

AUDIT METHODOLOGY

This audit covers all 40+ documents in the NoDrftSystems project knowledge base. Documents were reviewed for: completeness, internal consistency, operational usability, contradictions between versions, missing dependencies, and execution readiness.

Confidence ratings used throughout:

- **HIGH** — Verifiable from document content
 - **MODERATE** — Inferred from context and cross-document review
 - **LIMITED-DATA** — Requires human validation before acting
-

1. REPOSITORY OBSERVATIONS

1.1 Document Inventory Summary

Category	Count	Status
Business Planning	2	Active (Business Plan v2 + Business Foundation)
Addendums (numbered)	23	Active — mixed readiness
Operational Docs	8	Active — mixed completeness
Templates	1	Active (Template Library)
Legal Framework	1	Active — DISCLAIMER: Not reviewed by counsel
Pricing Architecture	1	Active

Total active documents reviewed: ~40

1.2 Version Discrepancies Identified

CRITICAL FLAG: Two business plan documents exist with materially different pricing

structures:

Document	Service Tier	Price
Business Plan v2 (Addendum pricing)	Launch Tier	\$3,500
Business Foundation	Foundation MVP	\$35,000-\$65,000
Business Foundation	Retainer/Support	\$6,000/mo
Business Plan v2 (Retainer)	Growth Retainer	\$3,500/mo

These are not the same product. They appear to represent two different market positioning strategies that have not been reconciled. The Business Foundation document operates at a higher price point (~\$35K-\$150K), while the Business Plan v2 operates at a lower entry point (\$3,500-\$28,000).

Required Action: Founder must decide which pricing architecture is the operative one. Proceeding with both active creates proposal inconsistency and client confusion.

2. STRUCTURAL PROBLEMS

2.1 Dual Pricing Architecture (CRITICAL)

As noted above, two service tier structures coexist without reconciliation. This is not a minor difference — the lowest tier in Business Foundation (\$8,000 Diagnostic) exceeds the mid-tier in Business Plan v2 (\$3,500 Launch). Operating from both simultaneously risks:

- Inconsistent proposals
- Incorrect margin calculations (Business Plan v2 margin projections assume \$3,500-\$28,000 revenue base)
- Confused client expectations
- Misrouted qualification decisions

Status: Unresolved. Needs founder decision before any proposal is sent.

2.2 KPI Framework Contradiction

The KPI Framework document (standalone) targets:

- Average Deal Size: \$50K+
- Gross Margin: >40%

The Business Plan v2 targets:

- Average Project Value: \$3,500 (M3) → \$10,000 (M12)
- Project Gross Margin: ≥85%

These are internally inconsistent. A \$50K+ deal size with 40% gross margin is a different business model than \$10K deals at 85% margin. **These documents were likely produced at different planning stages and neither was superseded.**

2.3 Addendum Count vs. Business Plan Reference

The Business Plan v2 appendix table references Addendums 1–19. The project contains Addendums 1–23. Addendums 20–23 (Essential Business Elements, Realistic Cost Analysis, AI Platform Tool Stack, Multi-Product Strategy) are not referenced in the master business plan. They appear to be later additions that were appended but not integrated into the master narrative.

Risk: An operator reading only the Business Plan v2 will not know Addendums 20–23 exist.

3. CRITICAL DEFICIENCIES

3.1 [CRITICAL] No Reconciled Master Pricing Document

Gap: Two pricing architectures exist. No document designates which is current.

Impact: Every proposal sent before resolution carries pricing risk.

Action: Founder reviews both structures, decides on operative pricing, and designates one document as canonical. All other pricing references updated or archived.

Owner: Founder

Deadline: Before first proposal is sent

3.2 [CRITICAL] Tier 1 Supervisor Layer Not Deployed

Gap: Per Addendum 14 and 19, the current state is 10 agents operating in isolation without orchestration (~\$940/month). The Tier 1 supervisor layer (MOA, QAS, CSM, HHC) is defined but not yet implemented.

Impact: Without MOA orchestration and QAS supervision, AI agents operate without scope enforcement, context packaging, or quality gates. Every AI output is unrouted and unvalidated at the system level.

Action: Deploy Wave 1 (Tier 1 + enhanced existing agents) before activating any additional Tier 2 agents.

Owner: Founder + ARE

Timeline: Weeks 1–4 (per Addendum 19 roadmap)

3.3 [CRITICAL] Legal Documents Not Reviewed by Counsel

Gap: The Legal Contract Framework document includes a disclaimer: *"All contracts must be reviewed and approved by licensed legal counsel before execution."* It is unclear whether this review has occurred.

Impact: Sending an unreviewed MSA or SOW to a client creates liability exposure.

Action: Confirm legal review status. If unreviewed, engage counsel before first engagement.

Owner: Founder

Deadline: Before any contract is sent to a client

3.4 [HIGH] AI Reliability Engineer (ARE) Role Is Vacant

Gap: The ARE is cited as a required human authority across QA, release gates, milestone validation, agent oversight, and client delivery. This role is listed as "TBD" in organizational documents.

Impact: Without an ARE, the QA layer has no human enforcer. AI agent outputs cannot be safely delivered to clients at volume.

Action: Hire or contract an ARE. Commission-only or part-time acceptable for early stage.

Define specific ARE responsibilities, authority thresholds, and review cadence.

Owner: Founder

Timeline: Month 1 (per Addendum 21 cost roadmap, ARE in Month 1 budget)

3.5 [HIGH] No Designated Canonical Document Registry

Gap: No master index specifies which version of each document is operative. With 40+ documents across multiple versions, there is no single source of truth about which documents are active, superseded, or in draft.

Action: Create and maintain a Document Registry (see Section 10 of this report).

Owner: ARE or Founder

Timeline: Immediate

3.6 [MODERATE] Addendum 22 (AI Platform Tool Stack) Not Cross-Referenced

Gap: Addendum 22 defines the specific AI tool selection (platforms, subscriptions, deployment patterns) but is not referenced in the agent architecture master (Addendum 14) or the cost roadmap (Addendum 19).

Impact: Agent deployment decisions may be made without reference to the tool selection rationale.

Action: Cross-reference Addendum 22 in Addendum 14's tool dependencies section.

3.7 [MODERATE] No Client-Specific Folder Template

Gap: The Template Library defines templates (Intake Form, Project Brief, SOW, etc.) but does not define a standard folder structure for each client engagement. When a new client is onboarded,

there is no defined directory scaffold to create.

Action: Create a canonical client folder template (see Section 9 of this report).

3.8 [MODERATE] Discovery Sprint is Priced but Not Consistently Scoped

Gap: Discovery Sprint appears in SOP-003 as a scope-clarification engagement triggered when a prospect scores 60–74 on the Client Evaluation Scorecard. However, the Service Pricing Architecture and Business Plan v2 do not include a clear Discovery Sprint line item and price.

Impact: Sales team cannot quote or propose a Discovery Sprint without improvising.

Action: Add Discovery Sprint as a named, priced, scoped service entry in the pricing architecture.

3.9 [LOW] Post-Mortem Template Exists but Post-Mortem SOP Does Not

Gap: The Template Library includes a Post-Mortem template, but there is no SOP governing when, how, and by whom post-mortems are conducted. The SOP Library (SOPs 001–008) does not include a post-mortem SOP.

Action: Add SOP-009: Post-Mortem as a standard close-out procedure.

4. RECONSTRUCTION PRIORITIES

In priority order:

Priority	Item	Required Before
1	Reconcile pricing architecture — designate one as operative	First proposal
2	Deploy Wave 1 AI agents (Tier 1 supervisor layer)	Any additional agent deployment
3	Confirm legal review of MSA, SOW, NDA	First contract execution
4	Hire or contract ARE	First client delivery
5	Create Document Registry (canonical versions list)	Ongoing operations
6	Add Discovery Sprint as a priced line item	First qualification call
7	Create client engagement folder template	First client onboarded
8	Add SOP-009 (Post-Mortem)	First project close
9	Cross-reference Addendum 22 into Addendum 14	Wave 1 deployment
10	Integrate Addendums 20-23 into business plan narrative	Next plan revision

5. PROFITABILITY AND EFFICIENCY FINDINGS

5.1 Margin Structure (HIGH CONFIDENCE — from documents)

The Business Plan v2 projects gross margins of 72-87% by tier. This is plausible given AI labor reduction (40-70% by tier), but depends on:

- Accurate time estimation at scoping
- Controlled scope creep (Kill Switch framework exists — good)
- AI agent cost not exceeding ~8% of project revenue (KPI target)
- Human hours remaining at the "strategic judgment + final QA" layer, not deep execution

At Month 1-2 burn of ~\$3,156 and a \$3,500 Launch project bringing in 50% deposit (\$1,750) at kickoff, the first project's cash flow is tight. The model becomes healthy at Month 3+ when a Platform project (\$12,000) arrives.

Efficiency Risk: If the ARE has not been onboarded by Month 2, the Founder must personally perform all QA functions. This creates a bottleneck that delays delivery and erodes the margin

advantage of AI augmentation.

5.2 Infrastructure Leverage (HIGH CONFIDENCE)

Addendum 23 (Multi-Product Strategy) makes a structurally sound argument: the \$2,770/month AI agent infrastructure, once deployed and paid for by client services revenue, has near-zero marginal cost for product development. This is the primary economic justification for simultaneous product development.

However: This logic only holds if Wave 1-4 deployment is executed on schedule. An agent stack operating at \$940/month (current state) with no Tier 1 orchestration produces inconsistent quality that undermines the efficiency gain entirely.

5.3 Outbound Dependency

The growth model depends on 2,000 outbound contacts/month (Apollo + Instantly). This volume requires:

- A built and validated ICP contact list
- Active outreach sequences (SDA + OOA agents online)
- A Growth Lead to manage reply routing and discovery calls

If the Growth Lead is not onboarded by Month 1 and the outbound stack is not operational by Week 3-4, the Month 2 revenue target (\$3,500) is at risk. The entire Month 2-6 projection is dependent on a functional outbound machine.

Status of outbound stack: Not verifiable with available data. Tool selection is defined (Apollo, Instantly, LinkedIn Navigator) but activation status is unknown.

6. TOOL STACK ASSESSMENT

Based on Addendum 22 and cross-document references, the defined stack is:

Function	Tool	Status	Assessment
Outbound sales	Apollo.io + Instantly	Defined	Core. Required for growth engine
CRM	TBD / HubSpot referenced	Unclear	Gap — CRM not definitively selected
AI orchestration	Claude API + workflow tool	Defined in architecture	Required before Wave 1
Development	React, Supabase, Node.js	Defined	Appropriate for scope
Project management	Notion + Airtable	Defined in Template Library	Adequate for current scale
QA tracking	Notion checklists	Defined	Functional but manual — acceptable at current scale
Finance / invoicing	Invoice template exists	Defined in Addendum 11	Acceptable. No automation described
Legal e-signature	Not specified	Gap	Required before first contract execution

Critical gap: No e-signature tool is designated (DocuSign, PandaDoc, or equivalent). All contract templates reference physical or digital signatures but no tool is specified. This must be resolved before first contract execution.

7. AI AGENT SKILL OPPORTUNITIES

Based on execution gaps identified in this audit, the following agent skills would have immediate operational value:

Skill	Agent	Value
Intake Routing	SDA (Sales Discovery Agent)	Auto-categorize inquiries, route to correct SOP
Scorecard Scoring	QDA / Manual initially	Score prospects against Client Evaluation Scorecard (Addendum 5)
Context Package Builder	CSM	Pre-populate project context for every agent activation
Proposal Generator	PEA (Proposal Engine Agent)	Generate first-draft proposals from scoped context packages
QA Pass Executor	QAS	Run Multi-Pass QA checklist against deliverables
Invoice Generator	IGA (Invoice Generation Agent)	Generate invoices from approved project milestones
Post-Mortem Synthesizer	(new — no current agent)	Extract lessons, update prompt library and templates

8. CLIENT INTAKE SYSTEM ASSESSMENT

Current State: SOP-001 (Intake) and SOP-002 (Qualification) exist. Addendum 6 (Pre-Engagement Questionnaire) and Addendum 5 (Client Evaluation Scorecard) exist. Template Library includes Client Intake Form.

What works: The qualification scoring matrix (Addendum 5) is functional. The SOP-001/002 flow is logically structured. The Kill Switch framework (Section 4.3, Business Plan v2) is well-designed.

What is missing:

1. No defined folder scaffold for new client records
2. No CRM tool confirmed for storing intake records
3. No documented routing logic for edge cases (e.g., inbound from partner referral vs. cold outbound vs. website form)
4. No documented response templates for declined prospects (SOP-002 says "decline with referral" but no template exists)

9. RECOMMENDED CLIENT FOLDER ARCHITECTURE

For each active client engagement, this structure should be instantiated:

```
clients/
└─ [CLIENT_NAME]_[PROJECT_ID]/
    │   └─ 00_INTAKE/
    │       │   └─ intake_form_completed.md
    │       │   └─ evaluation_scorecard.md
    │       │   └─ nda_signed.pdf
    │   └─ 01_DISCOVERY/
    │       │   └─ pre_engagement_questionnaire.md
    │       │   └─ discovery_call_notes.md
    │       │   └─ scope_brief.md
    │   └─ 02_PROPOSAL/
    │       │   └─ proposal_vX.X.pdf
    │       │   └─ proposal_decision_log.md
    │   └─ 03_CONTRACT/
    │       │   └─ msa_signed.pdf
    │       │   └─ sow_vX.X_signed.pdf
    │       │   └─ change_orders/
    │   └─ 04_EXECUTION/
    │       │   └─ project_brief.md
    │       │   └─ build_plan.md
    │       │   └─ milestone_log.md
    │       │   └─ agent_context_packages/
    │   └─ 05_QA/
    │       │   └─ qa_checklist_pass1.md
    │       │   └─ qa_checklist_pass2.md
    │       │   └─ qa_sign_off.md
    │   └─ 06_DELIVERY/
    │       │   └─ completion_report.md
    │       │   └─ release_sign_off.pdf
    │       │   └─ handoff_package/
    │   └─ 07_INVOICING/
    │       │   └─ invoice_001.pdf
    │       │   └─ payment_log.md
    └─ 08_POST_MORTEM/
        │   └─ post_mortem_report.md
```

10. IMMEDIATE ACTION PLAN

This Week (Before Any Client Work Begins)

1. **Resolve pricing architecture contradiction** — Founder decision required
2. **Verify legal review status** of MSA, SOW, NDA
3. **Select and activate e-signature tool**
4. **Create Document Registry** listing operative version of every document
5. **Begin Wave 1 agent deployment** (Tier 1 supervisor layer)

This Month (Before First Client is Onboarded)

6. **Hire or contract ARE** — Non-negotiable dependency for QA layer
7. **Activate outbound stack** (Apollo, Instantly, LinkedIn Navigator)
8. **Create client folder template** from structure above
9. **Designate a CRM tool** and configure intake routing
10. **Price and scope Discovery Sprint** as a standalone service

Month 2-3 (Before Scaling)

11. **Complete Wave 2 agent deployment** (Revenue + Client Success agents)
 12. **Conduct first post-mortem** on initial project using new SOP-009
 13. **Integrate Addendums 20-23** into business plan narrative
 14. **Initiate SOC 2 Type I audit planning** (referenced in strategic alignment doc)
-

11. DEFERRED OR OPTIONAL IMPROVEMENTS

These items carry value but do not block execution:

- Bilingual capability (Transcreation Agent TCA) — Activate in Wave 4
 - NoDrft Platform (PaaS) — Month 6-9 per roadmap
 - SOC 2 Type I audit — Month 9+ (referenced as preparation for enterprise sales)
 - Content Products as standalone SKU — Ongoing, low priority vs. client revenue
 - Partner program formalization — Month 4+ when first client referrals are received
-

12. UNKNOWNNS AND DATA GAPS

Unknown	Risk Level	Needed For
Legal review status of MSA/SOW/NDA	HIGH	First contract execution
ARE hire status and timeline	HIGH	First client delivery
Outbound stack activation status (Apollo, Instantly)	HIGH	Month 2 revenue
CRM tool selection and status	MODERATE	Intake routing and pipeline tracking
E-signature tool selection	HIGH	First contract execution
Operative pricing architecture (v2 vs. Foundation)	CRITICAL	Every proposal
Addendum 22 tool stack implementation status	MODERATE	Wave 1 agent deployment
Current agent count and active configuration	MODERATE	Wave 1 baseline

This audit is based on project knowledge documents available as of April 2026. Human validation required before treating conclusions as final. All "needs action" items require Founder review and decision.
